

FLIPPER DELTA® anchor Superior High Holding Power

Our Flipper Delta® superior high holding power anchor with its easy handling and rapid penetration in different soil conditions is known worldwide. It is used in the offshore and dredging related business. Manufactured from high tensile steel and approved by all classifications, we are able to offer you the Flipper Delta® anchor you need for your project. Together with the Flipper Delta® anchors, we are able to supply a specially designed anchor rack. The anchors can also be rented with chain cables and connecting shackles for almost any desired period of time.

Major advantages

- Proven superior high holding power capacity
- Excellent efficiency (weight / holding power)
- Open construction for smooth and good penetration in different kinds of soil
- No rotation, which means no decrease of holding capacity and no dragging of the anchor
- Easy dismantling for transport purposes
